

**Cedar-Knox Public Power District**  
**Policy 10-942**  
**Net Metering**

**I. OBJECTIVE**

To set forth a policy for the interconnection and net metering of renewable energy generation that is consistent with Nebraska Revised Statutes §§ 70-2001 through 70-2005. Net metering is available to eligible customers/members whose electric service is supplied by Cedar-Knox Public Power District (CKPPD).

**II. POLICY**

CKPPD recognizes its obligation to provide an interconnection to qualifying facilities that are eligible for net metering and will comply with all applicable laws and rules governing net metering and distributed generation.

**III. DEFINITIONS**

**Avoided cost:** The incremental costs to CKPPD of electric supply which, but for the purchase from the qualifying facility, CKPPD would purchase from another source.

**Customer-generator:** The party that is in control of the qualified facility that is located on premises owned, leased, or otherwise controlled by the party.

**Interconnection Application:** Form to be used by the customer generator to submit its formal request for interconnection to the distribution system. Application must be received and approved at least 60 days prior to interconnection of the qualifying facilities.

**Interconnection Agreement:** The written agreement between the customer-generator and CKPPD that outlines the requirements and obligations of both the customer-generator and CKPPD.

**Net metering:** The measured difference between the electricity supplied to a customer-generator by CKPPD and the electricity generated by the customer-generator and delivered to CKPPD at the same point of interconnection.

**Rated generating capacity:** The maximum continuous kW generation capacity at the generation source as described by the manufacturer. If a maximum continuous kW generation capacity is not provided, a peak value will be used. For purposes of measuring the output of the customer generation, generation capacity shall be measured in AC.

**Qualified Facility:** Is as defined in Nebraska Statute §70-2002 (7).

**IV. ELIGIBILITY**

1. The customer-generator must be a customer in good standing with CKPPD.
2. The customer-generator must complete, sign, and return to CKPPD an Interconnection Application no less than 60 days prior to interconnection with the distribution system operated by CKPPD and shall meet with an individual designated by CKPPD for the purpose of

discussing the proposed generator characteristics and allowing CKPPD's input in sizing the load for the proposed customer-generator. The qualifying facility must be interconnected with a monthly account that maintains load of not less than the proposed qualifying facility. Seasonal accounts are not eligible for net metering.

3. The customer-generator shall enter into a written interconnection agreement with CKPPD.
4. The customer-generator shall pay CKPPD for all costs incurred by CKPPD for equipment or services required for interconnection of the qualified facility unless otherwise provided for in statute.
5. The qualified facility must meet the requirements of Nebraska's net metering law §70-2002 (7):
  - a. Has a total aggregate rated generating capacity, from single or multiple generators of twenty-five kilowatts (25kW) or less and shall operate at a measured capacity of less than at or below 25 kW at all times at one location behind a single meter.
  - b. Uses as its energy source methane, geothermal, solar, wind, biomass, or hydropower resources.
  - c. Is located on premises that are owned, operated, leased or otherwise controlled by the customer-generator.
  - d. Operates in parallel with CKPPD's electric distribution system.
  - e. Is intended primarily to offset and not exceed part of or all of the customer-generator's requirements for electric energy at the same location and not at another location.
  - f. Meets all safety and performance requirements of CKPPD and all applicable regulations, interconnection, and reliability standards established by the National Electrical Code, the National Electrical Safety Code, the Institute of Electrical and Electronics Engineers, and the Underwriters Laboratories. These requirements include being equipped to automatically isolate the qualified facility from the electric system in the event of an electrical power outage or other conditions where the line is de-energized.

## **V. OPERATION**

1. A metering system shall be employed to read the flow of energy in two directions. If the customer's meter is not capable of measuring the flow of electricity in two directions, CKPPD will provide such a metering system. CKPPD, at their cost, shall have the right to install metering on the qualified facility(s) for information and reporting purposes.
2. In months when the customer-generator generates more electricity than is consumed, all such excess energy will be expressed as a monetary credit equal to the avoided cost per kW-hour for CKPPD for the month of generation. Monetary credits shall be applied to subsequent bills of the customer-generator and shall offset the cost of energy owed by the customer-generator.
3. A customer-generator receiving service under this policy will be subject to the same retail rate as those who are not generators. Customer-generators served under this rate remain responsible for all charges from their normal rate schedule including monthly minimum

charges, customer charges, horsepower charges, meter charges, facilities charges, demand charges and surcharges.

4. Electrical energy sold and delivered to CKPPD, shall be purchased through a credit on a future invoice to the Customer for an amount equal to the calculated avoided cost as outlined in the Monthly Compensation section of this Rate Schedule. Upon a transfer or closing of an account or at the request of the customer at billing period year end, any credit balance can be reimbursed to the customer by means of a direct payment from CKPPD to the Customer.
5. At a time when the total generating capacity of all customer-generators using net metering is equal to or in excess of one percent of the rated capacity necessary to meet CKPPD's average aggregate customer monthly peak demand forecast for the calendar year, CKPPD may deny net metering service to additional customer-generators.
6. In the event the qualified facility or customer-generator fails to meet the requirements of this policy, the customer-generator will become ineligible for net metering.
7. The customer-generator will be asked to annually submit generation data for their qualified facility to assist CKPPD in complying with state net metering reporting requirements.
8. CKPPD will submit data to the Nebraska Power Review Board and will publish the same data on the CKPPD website. Such data will include; total number of qualified facilities, total estimated rated generating capacity of qualified facilities, total estimated net kilowatt-hours received from customer-generators, and total estimated amount of energy produced by the customer-generator.
